KLASS

In 1973, **Mestas Metal Endüstri ve Sanayi A.Ş.** was founded in Kayseri. Our company specialises in designing and manufacturing a wide range of products varying from **free standing ovens, semi professional ovens, built in ovens, built in hobs, cookers, to quartz electrical heaters** and one of the leading companies in Turkey.

Mestas, continues its activities on a 42.000 squaremeter opened area and 28.400 squaremeter closed area with the modern technology and put its products on markets under the brand name **“Klass”**.

In line with capacity expansion, our company also keeps up its productions returns on full capacity with the technology by employing advanced computerised machinery. Our company differ from those of similar organisations by taking into account aesthetics, ergonomoy and safety aspects in the design and manufacturing process, by using first quality material on every production process and employing highly qualified engineers and specialists in their field. We have been awarded by **CE, GS, CB SASO, SONCAP**, and some other quality certifications for different international markets due to this specializes.

On the other hand; design development, prototype and pilot production, on-line and off-line quality control systems above all; continuous market research are the drivers of our company's success.

We are aware of the fact that one of the most important factors in realizing our vision of becoming a leader in international markets is ensuring the continuous development of our employees who constantly review their jobs and seek better and newer methods. That's why we hold regularly seminars and further education to all our employees. By this way we can optimize the individual outputs, so our company aspires to ensure customer satisfaction and sound growth by providing products and services of high universal quality and standards.

Due to our mentioned above and company policy, our products are being exported to **Europe, Africa, Central America, South America, Middle East** and **Gulf countries**. We have done business with lots of companies from more than **90 different countries** and have had a good working relation with all of them, with no complaints from our customers.

Timers

Electronic timer enables your oven to get the food ready to serve at the desired time. Also several **cooking functions**, **easy menus** and **useful interfaces** make your work easier. The only thing to be done is to program the cooking time and ready time.

Touch • Timer

Programmer • Timer

TFT LCD • Timer

Oven Door

Maintenance and cleaning of the oven door

Lift by pressing on plastic latches on left and right side as shown and pulling the profile toward yourself.

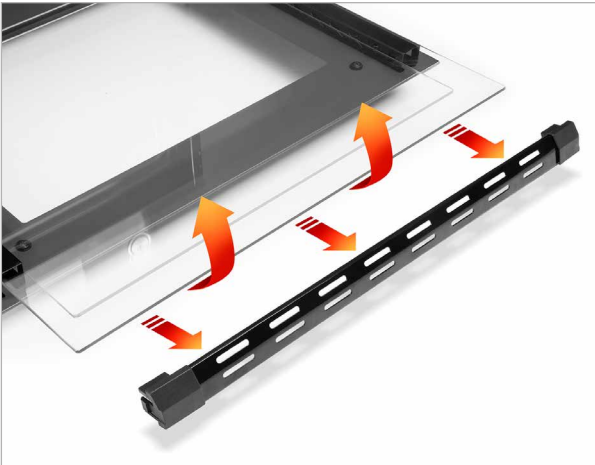

Glass is released after profile is removed as shown. Remove the released glass by pulling toward yourself carefully. Outer glass is fixed to oven door profile. You can perform glass cleaning easily after glasses are released.

EASY REMOVABLE & EASY CLEAN

As for the glass that remains in the interior, first pull it slightly toward you in the direction of the arrow as shown and lift the bottom holders up slightly, then lift it slightly upwards.

Maintenance and cleaning of the wire rack

It is possible to clean by removing the wire shelf system located on the right and left wall of your device. Release the wire by pulling it in the downward direction of the arrow as in the bottom wire of the wire rack. Complete the disassembly by pulling the hook on the top of the free-standing wire shelf from the slots on the side wall and pulling the bottom part in the direction of the arrow at an angle. It is possible to replace the wire by reversing the operations you have already done to replace it.

Accessory

One wire grill and one tray are provided as standard in the device. Other accessories are optional. Does not come into the oven.

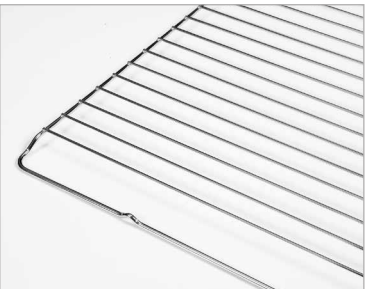

Tray

Used for pastry (cookie, biscuit etc.), frozen foods.

Wire grill

It is used for frying or to place baked, fried and frozen food in desired shelf.

Telescopic rail

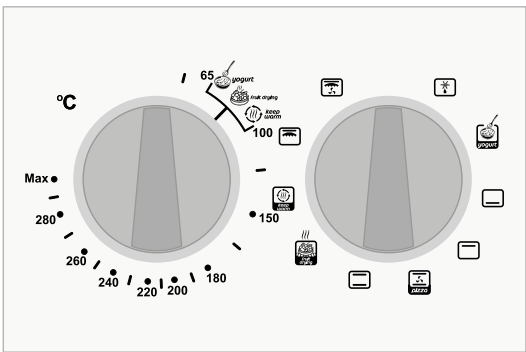

Trays and wire racks can be removed and installed easily thanks to telescopic rails.

Delicious fried taste is achieved without using little or no oil. More dishes can be prepared with the large interior volume. Fruits, vegetables and meat can be dried in the oven. Food is not battered or disintegrated, and its texture is preserved. With its new design, equal heat distribution is ensured in the oven by providing homogeneous cooking. More than one food can be fried at the same time. A much larger amount of frying can be done at one time. Many different types of oil (butter, plain oil, etc.) can be used.

Our new switch and functions

With the drawer function, which ensures that the prepared foods are kept at the appropriate temperature until serving time, you can serve both the plates and the cooked foods inside them warm.

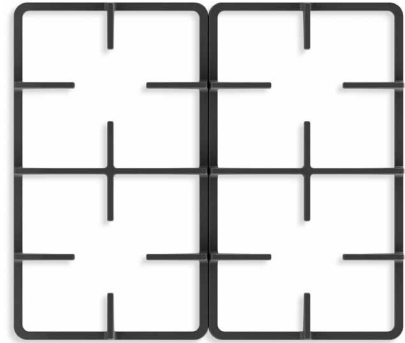

Dishwarmer drawer
